Duration: 3Hrs **[Max Marks: 80]**

N.B.: (1) Attempt any four questions
(2) All questions carry equal marks
(3) Assume suitable data, if required and state it clearly

Q1	A	Explain any five data centric consistency models with example data stores.	[10]
	B	Explain different load estimation policies and process transfer policies used in load balancing approach of distributed system.	[10]
Q2	A	What is Remote Procedure Call? Describe the working of RPC in detail.	[10]
	B	Explain Bully election algorithm.	[10]
Q3	A	Discuss design and implementation issues of distributed shared memory.	[10]
	B	What are desirable features of a good DFS?	[10]
Q4	A	Discuss various issues and goals related to design of distributed system.	[10]
	B	What is distributed mutual exclusion? Explain how Suzuki-Kasami's broadcast algorithm achieves distributed mutual exclusion.	[10]
Q5	A	What is need of code migration? Explain the role of process to resource and resource to machine binding in code migration.	[10]
	B	Explain various file caching schemes.	[10]
Q6	A	What is physical clock? Explain any one physical clock synchronization method.	[10]
	B	What is fault tolerance? Describe different types of failure models.	[10]
