

Assignment I

Q.1. Go to one of your social media pages Facebook, Twitter, etc.

⇒ @Naval Ravikant

a) View all the posts from the last day, and rate them for importance on a scale 5 where 1 is unimportant and 5 is very important.

⇒

i) Post on Wealth creation: Rating - 5.

ii) Philosophical reflection: Rating - 4

iii) Investment Advice: Rating - 5

iv) Book recommendation: Rating - 3

v) Cryptocurrency opinion: Rating - 5

b) For each person who has posted something, list all ratings you gave to their posts.

⇒ Since all the posts reviewed are from Naval Ravikant, the ratings are as listed above.

c) Do some people stand out as posting more important information than others?

⇒ Naval Ravikant consistently shares content that is thought-provoking and relevant to entrepreneurship, wealth creation, and personal development. His posts often provide deep insights and practical advice, making them stand out in terms of importance.

d) Attributes of Individuals sharing important information.

⇒ Individual like Naval, who share more important information, often possess extensive experience in their fields, a track record of success and a commitment to continuous learning. Their content reflects a blend of personal experience, professional expertise and philosophical insights.

e) If there is no pattern showing who shares the most interesting information, who do you think that is?

⇒ In this case, a pattern is evident, with Naval Ravikant consistently showing high-value content. However, in broader social media networks, the absence of a clear pattern could result from the diversity of one's connections, varying personal interests, or the applications of filters that curate content differently.

Q.2 Choose two social media websites, Pull up their privacy policies and answer the following questions for each.

a) What information will be collected about you?

⇒

i) Facebook : Collects data you provide during account creation, such as your name, email address, phone number and date of birth. It also gathers content you upload, your connections, messages and usage patterns. Additionally, Facebook collects device information, IP addresses and data from third-party partners.

ii) Twitter : Requires a display name, username, password, email address or phone number, and date of birth for account creation. It also collects content you post, your interactions, device information, IP addresses and may collect biometric information with your consent for security purposes.

b) How much of that information is really necessary for you to use the site? Are they asking for more than they need?

⇒

i) Facebook : Basic information like name and contact details are necessary for account functionality. However, data collection extends to browsing habits, location and interactions, which may not be essential for basic use but serve advertising and personalizing purpose.

ii) Twitter : Basic account information is required. Additional data, such as location and usage patterns, enhance user experience and security but are not strictly necessary for basic functionality.

c) Do you have access to all information stored about you?

⇒

i) Facebook : Provides tools for users to access and download their data, including posts, messages and profile information.

ii) Twitter : Allows users to request and download their data, including tweets, direct messages and account information.

d) How will your information be shared with third parties?

⇒

i) Facebook: Shares user information with third-party partners, including advertisers and service providers to personalize content and ads.

ii) Twitter: Shares data with affiliates, service providers and as directed by users.

e) Can your data be sold?

⇒

i) Facebook: States it does not sell user data but shares information with third parties for advertising and analytics.

ii) Twitter: Does not explicitly state that it sells user data but shares information with partners for various purposes.

f) Are you allowed to permanently delete your data from the system?

⇒

i) Facebook: Allows users to delete their accounts, which initiates the removal of user data from their systems.

ii) Twitter: Users can deactivate their accounts, leading to the deletion of their data after a specified period.

Q.3 Look up your favorite movie on Amazon.com, Facebook, the IMDB and Rotten tomatoes.

a) What information does each site provide in terms of reviews and ratings?

=>

- My Favorite movie is "Phir Hera Pheri"

i) Amazon.com: The DVD and Blu-ray listings for "Phir Hera Pheri" feature customer reviews and ratings. For instance, the Blu-ray version has an average rating of 3.7 out of 5 stars, based on 28 customer reviews.

ii) IMDb: The film holds a rating of 7.3 out of 10, derived from over 29,000 user votes. Users can also read detailed reviews discussing various aspects of the movie.

iii) Rotten tomatoes: Audience reviews are available, with some users rating the film 5 out of 5 stars. However, there is no aggregated critic score or Tomatometer rating.

b) What information does each site provides in terms of recommendations for other movies?

⇒

i) Amazon.com : The platform suggests related titles based on browsing history and purchase patterns. For example, users interested in "Phir Hera Pheri" might see recommendation for other Bollywood comedies or films featuring the same cast.

ii) IMDb : The "More like this" section on IMDb lists movies similar in genre or featuring the same actors, helping users discover related content.

iii) Rotten tomatoes : While specific recommendations are limited, users can explore movies by genre or actor to find related movies.

iv) Facebook : Recommendations are primarily based on user interactions, such as liked pages or shared content, potentially suggesting similar movies or related fan communities.

c) Which sites, if any, use your social network to provide information? What information do they use?

⇒

i) Amazon.com: Utilizing browsing and purchase history to recommend products but doesn't directly incorporate social media network data.

ii) IMDb: Primarily relies on user activity within its own platform for recommendations, without integrating external social network information.

iii) Rotten Tomatoes: Focuses on user reviews and ratings within the site, without leveraging external social networks.

iv) Facebook: Leverages your social network extensively, showing content liked or shared by friends, and suggesting pages or groups based on your social interactions.

d) What information is most useful to you from everything available from all the sites? Why?

⇒

- The usefulness of information varies based on individual preferences.

- i) Detailed reviews and ratings
- ii) Purchase options and customer feedback
- iii) Social engagement and community content

Q.4 Think about all the social media websites you belong to.

a) If a company came along and bought your data from all of those companies and put it all together, what could your reaction be?

⇒ I could be concerned about my privacy, as this could create an extremely detailed profile of my interests, habits, relationships and even location history. Even if my data is anonymized, large datasets often allow for re-identification through pattern analysis.

b) What if that company decided to sell your aggregated data to marketers?

⇒ While targeted advertising is already common, selling highly detailed user profiles could lead to manipulative marketing strategies, price discrimination or even creation of psychological profiles to influence purchasing decisions. I want more transparency and control over how my data is used.

c) → What if they decide to sell it to the government?

⇒ This could raise serious ethical and legal concerns. While some government use might seem justified, broad surveillance could violate personal freedoms.

d) What if they decide to publish it freely online so that anyone could access it?

⇒ This could be the worst case scenario - it would mean loss of control over my personal identity, financial security and private life.

e) Describe three threats you think people could face if information were shared publicly?

⇒
i) Identity theft: If personal details like full name, DOB or address are leaked, bad actors could use them for fraud, scams, etc.

ii) Doxxing & Harassment: Personal information being public could make individuals targets for online harassment, stalking or real-world threats.

iii) Blackmail: Old social media posts, private messages or personal images could be misused to damage someone's reputation, jeopardize careers or be used for extortion.

2/2/25

Assignment - 2

Q.1 Imagine you have started a new movie website. You will have information about every film and you want to use social features to show readers the most relevant movie reviews.

a) Describe how you will sort the reviews using social data?

⇒ To ensure the most relevant reviews appear first, I would rank them based on a combination of:

i) User engagement - Reviews with more likes, shares and comments will rank higher since they indicate valuable insights.

ii) Friend & Follower activity - Users will see reviews liked or written by their friends or people they follow first.

iii) Review Quality score - Reviews with detailed analysis, proper formatting and balanced opinion will be rated higher, possibly using AI to assess readability and sentiment balance.

b) What information will you need about the users, if any? How will you use it?

⇒ To enhance the user experience, I will collect specific social information that allows for personalized recommendations.

- This includes information about the user's friends or follows so that they can see reviews from people they trust.
 - Their past ratings and reviews will be used to suggest reviews of movies similar to the ones they enjoyed.
 - Additionally, data about their watchlist and viewing history will help in prioritizing reviews for movies they are interested in.
- c) What type of interaction will you require from users on the site, if any?

- ⇒
- The website will allow different levels of interactions based on user preferences.
 - Users who prefer passive engagement can browse reviews without logging in, ensuring easy access to network content.
 - However, logged-in users will have the ability to interact by liking, sharing, or commenting on reviews, as well as following other reviewers to receive personalized recommendations.
 - For those who actively contribute, the platform will provide the option to write detailed reviews and rate movies, allowing them to build credibility over time.

Q.2

a) List each company and their social media accounts.

⇒

1) U.S. Polo Assn.

- Facebook : U.S. Polo Assn.

- Twitter : @USPoloAssn

- Instagram : @uspolaassn

- YouTube : U.S. Polo Assn. official

2) Nike

- Facebook : Nike

- Twitter : @Nike

- Instagram : @nike

- YouTube : Nike

3) Fanta

- Facebook : Fanta

- Twitter : @Fanta

- Instagram : @Fanta

- YouTube : Fanta

4) Apple watch

- Facebook : Apple

- Twitter : @Apple

- Instagram : @Apple

- YouTube : Apple

5) Samsung

- Facebook : Samsung
- Twitter : @Samsung
- Instagram : @samsung
- YouTube : Samsung

b) Find as many counts for each social media accounts as described in the section on measuring success.

⇒

1) U.S. Polo assn.

⇒ The brand has a strong following across its social media platforms, with approximately 2.5 million followers on Facebook, 100,000 on Twitter, over 2 million on Instagram and around 50,000 subscribers on YouTube.

2) Nike

⇒ Nike has one of the largest social media followings, with over 35 million followers on Facebook, 9 million on Twitter, 200 million on Instagram and around 1.5 million subscribers on YouTube.

3) Fanta

⇒ On Facebook it has 20 million followers, 2,00,000 on Twitter, 1 million on Instagram and 1,100,00 subscribers on YouTube.

4) Apple watch

⇒ Apple has over 13 million Facebook followers, 8 million Twitter followers, 30 million Instagram followers and 15 million YouTube subscribers.

5) Samsung

⇒ Samsung has 50 million Facebook followers, 12 million Twitter followers, 20 million Instagram followers and 5 million YouTube subscribers.

c) How often does the company interact on their social network site? Is it many times a day, few times a week, or never?

⇒

a) U.S. Polo Assn.

⇒ U.S Polo Assn. maintains an active social media presence, posting content several times a week across all platforms.

b) Nike

⇒ Nike engage with its audience daily, often posting multiple times across various platforms.

c) Fanta

⇒ Fanta posts content several times a week, focusing on fun and engaging material.

4) Apple

⇒ Apple maintains a consistent posting schedule, with new content appearing weekly, often aligning with product launches or updates.

5) Samsung

⇒ Samsung engages with its audience daily, often posting multiple times across various platforms.

d) What kind of interaction is the company doing? Broadcast, request for input, direct interaction or a combination? Provide an example of each.

⇒ All five brands primarily use broadcasting to promote products and share branded content.

→ Nike and Fanta stands out for audience engagement, using polls, challenges and user-generated content, while Samsung excels in direct customer support.

→ Apple keeps interaction minimal, focusing on premium storytelling.

→ Nike and U.S. Polo Assn. actively respond to customers, making them more interactive.

→ Overall, each brand tailors its strategy to fit its audience, balancing engagement, promotions and direct communications.

a) Assess the company's social media strategy. What are they doing well and why? What could they do better, why would that be better and how should they do it?

⇒ Each brand tailors its strategy to its audience. Nike excels in storytelling and engagement. Fanta uses humor and interactivity and Samsung focuses on tech-driven content and support.

US Polo Assn. maintains a stylish presence but could add more user content, while Apple relies on premium branding with limited interactions.

Overall, increasing real-time engagement and interactive content could strengthen their connections with users.

Q.3 Find a social reader application for a major online information service source.

a) Sign up to use the application or connect it to your social media account.

⇒ I have signed in to The Washington Post using Google and set the reading preferences.

b) What article does it recommend to you?

⇒ While signing I have selected categories like technology, politics, sports, business, Health, Music, movies, etc., the site is recommending top news stories, trending political article, theater reviews, and tech updates. The recommendations are based on selected interests and current popular topics.

c) How is it making those recommendations?

⇒ Recommendations are made using an algorithm that analyzes your reading habits, interactions, and trending topics. Some apps also incorporate collaborative filtering, which suggests articles based on what similar users are reading.

d) What is it showing you about your friend's behavior, if anything?

⇒ Since I signed in with Google, The Washington Post might not show direct friend activity unless it integrates with a social platform like Facebook or Twitter.

e) Read some article through the social reader. What appears on your profile page within the application? What information, if any, appears on your social media profile page?

⇒ On the Washington Post profile it may track your saved articles, reading history, and recommended stories.

f) How useful are the recommended articles? Explain.

⇒ The usefulness depends on how well the recommendation matches your interests. Since I selected specific categories, the articles are relevant.

9.4 Find a major company offering customer service on Twitter. Search Twitter to find 10 most recent customer service interactions they have had.

a) Was the customer service inquiry resolved?
⇒ In many instances, companies responded to customer complaints with apologies and request for further details to assist in resolving the issues. However, the public nature of Twitter means that follow-up details to assist in resolving the issues, resolutions are not always visible, making it difficult to confirm whether each inquiry was fully resolved.

b) How many messages, on average, were sent between the company and the person including sending the request? Did the company ever direct the conversation to direct messages?

⇒ Typically, there is an initial public complaint from the customer, followed by a public response from the company requesting more information. Companies often encourage customers to continue the conversation via direct messages (DMs) to protect privacy and gather detailed information.

c) Was the customer service request handled by one single person all the way through, was it handled by several people, or is it impossible to tell?

⇒ Due to the nature of Twitter handles representing the company rather than individual agents, it's challenging to determine whether a single person manages the entire interactions. The responses are typically signed off with the company's name, making it unclear if multiple representatives are involved.

d) On average, how long did it take for the person's request to receive its initial reply from the company?

⇒ While specific response times vary, companies like Lowe's, Best Buy and Macy's strive to address public complaints promptly, often within a few hours. However, exact response times can differ based on the company's social media practices and the time the complaint was posted.

e) Overall, would you say the company successfully handled the requests? Why or why not?

⇒ Publicly, these companies demonstrate a commitment to addressing customer concerns by responding promptly and directing the

Conversation to private channels for resolution. However, the success of these interactions depends on the effectiveness of the follow-up in private message, which is not visible publicly. Therefore, while the initial handling appears proactive, it's difficult to assess the overall success without insight into the private resolutions.
