

(3 Hours)

[Total Marks: 80]

Instructions:

- N.B. : (1) Question No 1 is Compulsory.
 (2) Attempt any three questions out of the remaining five.
 (3) All questions carry equal marks.
 (4) Assume suitable data, if required and state it clearly.

Q1. Attempt any 4 questions out of 6. Each question carries 5 marks.

- Compare between DOS, NOS and Middleware.
- Explain with the diagram Dispatcher-Worker thread model.
- Explain happens before relation with its features.
- Explain naming in a distributed system.
- Compare caching and replication.
- Explain stream - oriented communication.

Q2. Each question carries 10 marks.

- Explain in detail Raymond's Tree-Based algorithm (Token-based algorithm).
- Write a note on the Network File System (NFS) .

Q3. Each question carries 10 marks.

- Write note on Andrew File System (AFS) .
- Explain steps involved in the RMI execution process in detail.

Q4. Each question carries 10 marks.

- What is Remote Procedure Call? Explain the working of RPC in detail.
- Explain different types of distributed systems with diagrams.

Q5. Each question carries 10 marks.

- Explain with diagrams various client-centric consistency models.
- Compare static and dynamic load balancing algorithms.

Q6. Each question carries 10 marks.

- Explain with an example load sharing approach.
- Explain any one election algorithm in detail with suitable example.
