

## 6. SMA Applications & Privacy

Q.1 Differentiate among social media, web 2.0 and social network sites.

| Web 2.0                                                                                        | Social Media                                                                                   | Social Network sites                                                           |
|------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| 1) Second generation of web focused on user-generated content, usability and interoperability. | 1) Digital platforms that allows users to create, share and interact with content & each other | 1) Platforms specifically designed to build and maintain social relationship   |
| 2) Enable interactive content and collaboration online.                                        | 2) Facilitate communication, content sharing and engagement.                                   | 2) Foster personal networking and community building                           |
| 3) Users can create and edit content.                                                          | 3) Users can post, comment, like and share content                                             | 3) Users connect, message, tag and build relationship graphs.                  |
| 4) Broader internet concept encompassing tech and design.                                      | 4) Subset of web 2.0 Focused on social interaction and content.                                | 4) Narrower focus on connecting people and managing relationship               |
| 5) Content type is blog, articles, collaborative docs, media sharing.                          | 5) Content type is photos, videos, statuses, text posts, polls.                                | 5) Content type is personal profiles, status updates, networking interactions. |

Q.2 Explain issues addressed in privacy policy.

⇒

- A privacy policy is a legal document that explains how a company or website collects, uses, stores and protects users personal data.
- It addresses several important issues to ensure user rights and transparency.

### 1) Data Collection

- ⇒ A privacy policy clearly states what types of personal data are collected from users.
- It explains the sources of data collection such as user forms, cookies, social media plugins and browsing behavior.
  - It may differentiate between mandatory and optional data to inform users about what is essential for service use.

### 2) Data usage

- ⇒ The policy outlines how collected data is used, such as for personalizing content, improving services or targeted advertisement.
- It may explain lawful bases for data processing under data protection regulations like GDPR.
  - It often includes a description of internal use versus sharing with third parties or ~~persona~~ partners.

### 3) Data storage and security

⇒ The policy specifies where and how long user data is stored, such as on cloud servers or local databases.

- It outlines security measures like SSL encryption, firewalls and user access controls to protect the data.
- It may detail how the company responds to data breaches, including notification timelines to users and authorities.

### 4) Data sharing and Third-party Disclosure

⇒ It identifies third parties with whom data may be shared.

- The policy explains whether data is anonymized before sharing or if identifiable information is disclosed.
- It may include user options to restrict or opt-out of data sharing with certain partners.

### 5) Cookies

⇒ The policy discloses the use of cookies, web beacons, or similar tools for tracking user activity across websites.

- It often explains the purpose of each type of cookie, such as functional, performance or marketing cookies.
- It provides instructions for users to manage or disable cookies through browser settings or cookies banner.

### 6) User consent and rights

⇒ The policy informs users that their explicit or implied consent is required for data collection and processing.

- It lists user rights such as accessing, correcting, deleting or exporting their personal data.
- It explains how users can withdraw consent or contact the company regarding privacy concerns.

### 7) Policy changes and Updates

⇒ The policy includes a clause that reserves the right to modify the policy and informs users about the update mechanism.

- It states how users will be notified of changes.
- It often mentions the user's continued use of the service as acceptance of the revised policy.

Q.3 Summarize the ethical issues when mining social media.

⇒

### 1) Privacy concerns

- ⇒ Social media mining can unintentionally expose personal or sensitive information that users did not consent to share beyond their network.
- Even if data is publicly visible, it may not be ethically acceptable to analyze it without users permission.
- Mining data without proper privacy safeguards can lead to identity theft, stalking or other forms of misuse.

### 2) Lack of Informed Consent

- ⇒ Users often do not know that their content is being collected, analyzed or shared for research or business.
- Ethical data mining requires transparency and ideally, permission from data subjects.

### 3) Risk of bias and discrimination

- ⇒ Algorithms trained on social media data may inherit social or cultural biases present in online communities.
- This can lead to skewed results, discriminatory profiling or unfair content moderation practices.
- Responsible mining should include bias audits and efforts to ensure fairness in data interpretation.

#### 4) Misuse of data

- ⇒ Social media data can be misused for unethical targeting, such as political manipulations or spreading disinformation.
- Algorithms may be trained to push biased content to users for engagement, often without their knowledge.
- Irresponsible use of data analytics can cause real-world harm, from influencing elections to harming reputations.

#### 5) Location sensitivity

- ⇒ Mining geo-tagged posts or location check-ins may compromise a person's physical safety or expose private routines.
- Analysis of location data can inadvertently reveal ~~several~~ where someone lives, works or travels regularly.

#### 6) Transparency

- ⇒ Users and public deserve to know when and how their data is being mined, analyzed, or used for decision-making.
- Lack of transparency about algorithms and data use leads to distrust and questions about fairness and reliability.

Q.4 Explain the benefits of brand building

⇒

### Benefits

- 1) Increased brand awareness
- 2) Humanize your brand
- 3) Establish your brand as thought leader
- 4) Stay top of mind

#### 1) Increased brand awareness

⇒ With more than half of the world's population using social media, platforms like Facebook, Instagram and Twitter are natural places to reach new, targeted leads.

- As more people become familiar with your brand, it becomes easier to attract new customers, build trust and drive word-of-mouth marketing.

#### 2) Humanize Your Brand

⇒ A strong brand creates a relatable personality that helps customers emotionally connect with your business.

- By sharing behind-the-scenes content, engaging on social media and using a consistent tone of voice, you build authentic relationships with your audiences.

3) Establish Your brand as a thought leader  
 ⇒ Consistently producing valuable content and insights positions your brand as an authority in your industry.

- LinkedIn, especially the LinkedIn Publishing platform, is a great network to look out for when looking to build thought leadership.

4) Stay top of mind

⇒ Through regular interactions, memorable branding and consistent messaging, your brand remains present in the minds of your audience.

- This top-of-mind awareness ensures that when customers are ready to make a purchase, they consider your brand first.

Q.5 What are benefits of social media users who use social media?

⇒ Benefits :

- 1) Enhanced connectivity & Communication
- 2) Access to real-time information
- 3) Opportunities for self-expression
- 4) Networking and Professional Growth
- 5) Learning and skill development.

### 1) Enhanced Connectivity & Communication

⇒ Social media allows users to stay connected with friends, family, and communities across the world in real-time.

- It enables easy sharing of updates, photos, videos and events, making long-distance communication simpler and more engaging.

### 2) Access to real-time information

⇒ Users receive instant updates on current events, trends and topics of interest.

- Social media platforms often deliver news faster than traditional channels, giving users timely access to information.

### 3) Opportunities for Self-Expression

⇒ Social media empowers individuals to share opinions, showcase talents and build personal brands.

- Platforms like Instagram, TikTok and YouTube encourage creative content creation from art and photography to music and vlogging.

#### 4) Networking & Professional Growth

- ⇒ Sites like LinkedIn allows users to build professional networks, discover job opportunities and connect with industry experts.
- Users can gain visibility in their field by sharing knowledge and participating in discussions.

#### 5) Learning and Skill Development

- ⇒ Social media offers access to tutorials, educational content, webinars and communities focused on learning new skills.
- Platforms like Reddit, Quora and YouTube are rich with user-generated knowledge across various subjects.

Q.6 Relate different techniques to secure social media accounts.

⇒

### 1) Strong and Unique Passwords

- ⇒ Use complex passwords with a combination of uppercase, lowercase, numbers and special characters.
- Avoid reusing the same password across different platforms to minimize risk if one account is compromised.

### 2) Two-Factor Authentication (2FA)

- ⇒ Enable 2FA for an extra layer of security, it requires both a password and a verification code sent to your phone or email.
- This reduces the chances of unauthorized access even if your password is stolen.

### 3) Regular Privacy Settings Review

- ⇒ Frequently check and update your privacy settings to control who can view your posts, personal info and activity.
- Limit the visibility of sensitive information to only trusted connections.

### 4) Be Aware of Phishing Attacks

- ⇒ Don't click on suspicious links or download unknown attachments from messages, emails or DMs.
- Phishing is a common tactic used to steal login credentials or install malware.

### 5) Monitor Account Activity

- ⇒ Regularly check for unfamiliar login attempts or devices in the account activity section.
- Most platforms like Facebook, Instagram and Google provide security logs for such monitoring.

### 6) Limit Third-party App Access

- ⇒ Revoke access for unnecessary third-party apps connected to your social media accounts.
- These apps can act as potential entry points for hackers if not properly secured.

Q.7 Discuss various privacy attributes of Social Media Sites.

⇒

- Privacy Attributes :

- 1) Profile visibility setting
- 2) Data sharing controls
- 3) Location privacy
- 4) Tagging and Mention controls
- 5) Activity log and Post Management
- 6) 2FA
- 7) Block and Report Feature
- 8) Privacy policy.

Q.13 Discuss the parameters used to measure success of Social Media Platform:

→

- Here are 3 major metric on which we can measure success of social media:

1) Set your social media goals

⇒ The main goal is to learn how to use old social media campaign reports, how to measure social media success in the long run and how to search for the right answers before launching new social media campaign.

- Planning is a key to successful social media campaign and every social media measurement should start with one.

- That's why you have to set some important social goals from the very beginning, and then select the social media marketing metrics that correlate to those social objectives.

- Avoid ambiguity. Set the right expectations and decide what is your social campaign's purpose.

2) Choose the right social media measurement tool

⇒ Nobody is born an expert in measuring social media campaign success, which is why you will need a set of social media analytics tools to help you accurately track the performance of brand social media campaign.

- You must do your research to see what's better suited for your needs, what type of information will help you optimize your

efforts and social media campaigns and what tools will help you measure social media easier.

- You can start with the social platform's native analytics, but you must remember that the more you find out about your social media performance and how you can improve it, the more successful your business will be.
- And this will all be reflected in the public sentiment towards your brand, as well as your ROI.

### 3) Determine what KPIs you'll measure

⇒ Setting KPIs for social media is crucial. But remember, some KPIs are valued more than others.

- Engagement, reach, fans or followers evolution and growth in numbers are the top metrics that social media professionals are measuring.
- So, having quick access to these social media marketing KPIs across all social media platforms is a great time-saver.

Q.11 What are possible social media risks?

⇒

- Social media gives brand the tools to easily communicate with a global audience, but there are a few ways things can go wrong leading to unauthorized based communication:

1) User authorization

⇒ User authorization refers to what a user is able to do on a platform, especially a permission level that dictates if someone can view or make changes.

- On social media, it's important to make sure each individual with account access has the right authorization level.

2) Phishing

⇒ Phishing occurs when a malicious third-party attempts to impersonate a brand and communicate with customers to get them to reveal sensitive personal information.

- On social media, some individuals will create false brand accounts and publish posts designed to look like promotional offers.

using the same language used by the actual organization.

- By clicking on the link, the consumer may enable to impersonator to access sensitive information such as passwords and credit card numbers.

### 3) Non-secured password

⇒ LMG security notes that an 8-character password can be cracked in under 8 hours, a 10-character password takes 8 years and a 12-character password takes 77,000 years.

- The firm notes that organizations often opt for efficiency over security, choosing short and easy-to-remember passwords which make them vulnerable to hackers.

### 4) Reputation Damage

⇒ Negative reviews, misinformation, or viral backlash can harm a brand's image.

- For e.g., A controversial post by a company goes viral, leading to public outrage and boycotts.

### 5) Location setting

⇒ Location app setting may still track user whereabouts. Even if someone turns off their location setting, there are other ways to target a device's location.

- The use of public WiFi, cellphone towers and websites can also track user locations.
