➞ It definitely ruined a friendship of mine. His startup was making insane amounts of money. On one side you were an employee, so he needs to treat you kinda like a regular employee. Wouldn't the right thing to have done for any employee, friend or not, be to simply pay you? > As it was it left me scrambling with three small kids. you did not mention whether > nevertheless this person probably never was your friend. sorry, it's completely wrong. It's wild that you said that amount because that was exactly the number. I have other options. Wow. \$20k seems like a paltry sum to end a friendship over. This forum is so out of touch with reality sometimes I'm just left blinking and shaking my head, the question is, whether you can buy a friendship with the money. the answer is no. \$500,000 USD is a middle class wage in the Bay Area /s That's a very privileged perspective to have... I know plenty of people for whom a \$20k is a lot. I probably could have phrased it better, but my comment was taken out of context. Really? Try glancing the sorts of wages and earnings that literally 99% of the workforce receive. I'm unsure why my sibling comments seem to think the sentence ends at "sum". Is it? An interesting thought experiment to me is how much I would be willing to spend to end a friendship. I struggle to find any situation where 20k is a paltry sum. I was going to say "maybe to launch a rocket into space" but then I realized Space is expensive. > Very few friendships are robust enough to survive one party costing the other \$20k. Certainly, if the loss means you encounter financial hardship, you'd be understanding. So we can put a price on friendship? (/s) obviously we can't. hence no money can be enough to compensate for a friendship. When we started working together I suggested a six month trial, and he said let's make it a year. "friends are people that show up when it's not convenient for them" - my mum. I've seen friendships break down over one person not doing the dishes for a prolonged period. One of my favorite quotes is attributed to Saint Augustine: "If two friends ask you to judge a dispute, and you don't accept... You might lose them. Years back a coworker and I were having a small interpersonal disagreement. My supervisor was asked to judge. That's very PC, but there's a fine line between that and not showing leadership. When two friends ask you to judge a dispute, and you don't accept... You might lose them. If two friends ask you to judge a dispute, and you don't accept... You might lose them. Then they aren't my friends. If a "friendship" is that delicate, I'm better off, without them. This same exact argument could be applied to the first saying as well. That is correct. It's just a quote. Real life tends to have more subtlety. If they are that sensitive, I can also be sensitive and ask them why they've involved me. That would be a mildly weird reaction to "I don't want to get involved in your dispute". I would trust they would instead be happy to have such a socially intelligent friend. The friend you gain will be a fairweather friend though, most likely. If the person didn't end up going to work for the friend, but the situation still strained the friendship. > So anyhow, this guy who I'd worked alongside for years, who'd seen plenty of my code. > Or friend was trying to put you in your employee place (where you had to meet his needs). The purpose of a hiring process (as in take home assignment) is to see that the person is competent. How was it established? They mean it was established by the CEO's experience with him as an engineer. To them, you are describing the HR person's ego trip. That person should be fired, for being overreactive. I think the fundamental difference is just that you think that the technical competence of the candidate is more important than the HR person's ego. The only thing the candidate did wrong was to even start the assignment. Either way, it was a mistake. Indeed. That's why the HR person (or whoever it was) wasn't on a fireable ego trip. The process that they designed. This means they can change it and the excuse "I am not a hiring manager" is invalid. If I was a hiring manager who set up a hiring process to evaluate candidates, and if I were a CEO trying to build a successful company and found a willing competent candidate, I would hire them. You keep assuming ego. No ego is required to make sure people are put through the
