

NB:

- (1) Question No. 1 is compulsory.
- (2) Attempt any three questions out of the remaining five.
- (3) All questions carry equal marks.
- (4) Assume suitable data, if required and state it clearly.

Q1. ATTEMPT ANY FOUR.

[20]

- a. Design AND gate using Perceptron.
- b. Suppose we have N input-output pairs. Our goal is to find the parameters that predict the output y from the input x according to some function $y = x^w$. Calculate the sum-of squared error function E between predictions y and inputs x. The parameter w can be determined iteratively using gradient descent. For the calculated error function E, derive the gradient descent update rule $w \leftarrow w - \alpha \frac{dE}{dw}$.
- c. Explain dropout. How does it solve the problem of overfitting?
- d. Explain denoising auto encoder model.
- e. Describe sequence learning problem.

Q2. a. Explain Gated Recurrent Unit in detail.

[10]

b. What is an activation function? Describe any four activation functions.

[10]

Q3. a. Explain CNN architecture in detail. Suppose, we have input volume of $32 \times 32 \times 3$ for a layer in CNN and there are ten 5×5 filters with stride 1 and pad 2; calculate the number of parameters in this layer of CNN.

[10]

b. Explain early stopping, batch normalization, and data augmentation.

[10]

Q4. a. Explain RNN architecture in detail.

[10]

b. Explain the working of Generative Adversarial Network.

[10]

Q5. a. Explain Stochastic Gradient Descent and momentum based gradient descent optimization techniques.

[10]

b. Explain LSTM architecture.

[10]

Q6. a. Describe LeNET architecture.

[10]

b. Explain vanishing and exploding gradient in RNNs.

[10]
